

An effective sun protection lens must meet three requirements:

1. Effective protection from intense and prejudicial radiation
2. Allowing as much non-harmful light as possible to pass through
3. Reduction of glare and reflections.

This is the mission of Thinkfish Eyes: To protect your eyes while allowing as much light as possible to reach them. This is done by increasing contrast and definition, so that nothing escapes your sight. To make your day's fishing comfortable and effective and to ensure that the one thing you don't have to worry about is your eyes. This is our mission.

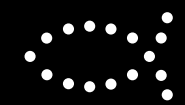

"As anglers we know what an angler wants, as engineers we know the limits of engineering and as designers the canons of aesthetics".

THINKFISH® GUARANTEE

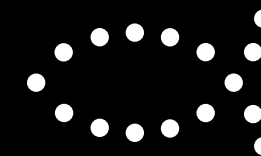

2-year guarantee of technical manufacturing defects

"Thinkfish® is the result of years of passion, fly-fishing experience and the collaboration of design and engineering professionals".

thinkfish®

THINKFISH EYES SPORT PRIMA

The first fishing glasses with lenses specifically designed to protect your eyes while increasing your vision.

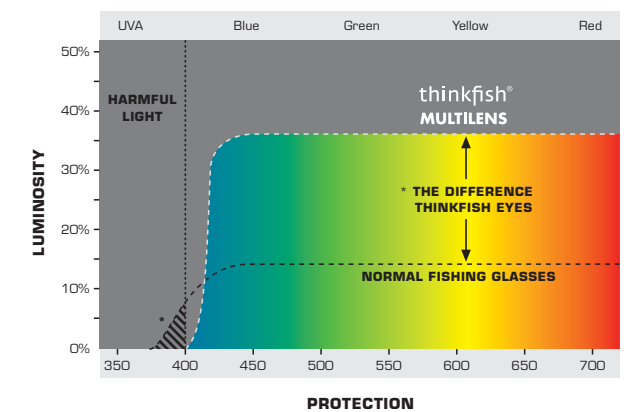

Thinkfish® seek differentiation and innovation not only through the product but also in terms of its presentation and packaging.

CONFIGURATIONS

Thinkfish® present the most effective POLAFILTER configurations depending on your fishing and climate conditions

- 400P1**
MLFilter filter with block at 400 nanometres, blocking out 100% UVA and UVB.
- C1P1**
MLFilter filter with block at 420 nanometres, blocking out 100% UVA and UVB and certain blue light wavelengths.
- 400P3**
MLFilter filter with block at 400 nanometres blocking out 100% UVA and UVB.

POLARISED FISHING GLASSES

Exposure Time:

How long, during a day's fishing, are you exposed to solar radiation? The first symptom may be itching, reddening or watering of the eyes and, as the hours of the day build up and exposure increases, this can turn into irritation, keratitis or even conjunctivitis.

Repetition:

How many days are you exposed to solar radiation due to the practice of open-air sports? Eyes, like skin, have a memory and reiterated exposure to solar radiation without the necessary protection can end up causing retinal and cataract problems.

PROTECTION AND QUANTITY OF LIGHT

"The job of the filter is to achieve an image with maximum contrast and visual comfort". Multilens

Clinical studies show an increase in damage to the retina and ocular irritation caused by exposure to short wavelength (UV and blue) light in those who practice open-air sports. This damage is becoming evident in people at an increasingly younger age and is more serious the longer they have been exposed without adequate protection. Since 1987 Multilens has been developing specific filters for the absorption of damaging light. ML Filters block out all UV along with specific bands of blue light. A protection filter that **increases sensitivity to contrast** and comfort, improving an angler's visual performance. Filters that, at Thinkfish®, we incorporate into all of our glasses.

GLARE AND REFLECTIONS

MLPRIMA + MLDURA TECHNOLOGY

The combination of antireflection, water-resistant and hardened coatings eliminate problems of glare caused by reflections of the sun and also alleviates problems of dirt and scratching, increasing Quality, Comfort and Durability.

POLARISED

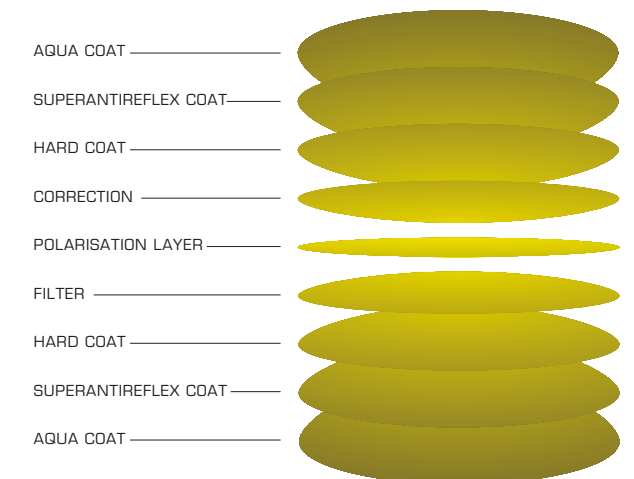

Light reflects off the water producing annoying glare that significantly limits vision and decreases anglers' possibilities. Our polarisation technology effectively blocks out these off-water reflections, providing Protection and increasing Vision along with Sensitivity to Contrast and Comfort.

ORGANIC LENS

This advanced technology combines with the security provided by our lightweight, break-resistant organic lenses.

MULTI-COAT TECHNOLOGY

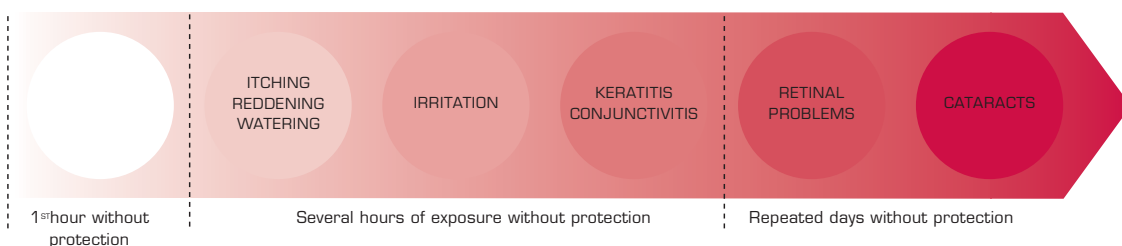

Thinkfish Eyes technology is provided by a combination of nine coats of the best filters and treatments available for optical lenses, particularly designed for the effective practice of sport fishing.

PRESCRIPTION

For those anglers that require the best technology and protection combined with a specific magnification we can also offer you the possibility of turning our glasses into prescription glasses. Contact us at our web.

SERIOUSNESS OF OCULAR PROBLEM

[Filters with a block below 400 nm do not guarantee that these problems will not occur]

Technology: MULTILENS
